Using outcomes data and reports effectively

Anna Dukes
Speech and Language
Therapist

Who is the data being reported on?

Adults from the age
of 18 onwards.

Adults who come
under our
Neurodevelopmental
service (adults with
Learning Disability
and/or Autism).

What data is being reported on?

Communication
assessment and
intervention.

Dysphagia/eating,
drinking and
swallowing therapy.

Templates are on
System1.

Initial and final
outcome measures for
each person and their
episodes of care.

Where is the data being reported?

- Collated and uploaded to ROOT by an information analyst.
- Monthly liaison with the information analyst who informs how many clients have been added within the last month.
- The clients are only counted if both the initial and final therapy outcome measures have been completed.

When is the data being reported effectively?

- **Information analyst collates data monthly**
- **Review the data quarterly**
 - **For discussion in team meetings.**
 - **For emails to be sent to service managers.**

How is the data captured effectively?

Five different reports chosen from the categories on ROOT to look at individual changes as well as the wider impact

Change in individual TOMs domains

How is the data captured effectively?

Five different reports chosen from the categories on ROOT to look at individual changes as well as the wider impact

Change across multiple TOMs domains

Why use data outcomes and reports?

To be able to ***monitor the outcomes*** of the team and service over time i.e. looking at effectiveness and efficiency of current SLT input.

To demonstrate and ***raise awareness*** to other teams, management, and senior decision makers within the service, the impact of speech and language therapy on individuals.

To ***celebrate the impact*** of the therapeutic input provided to our clients and their support network with fellow SLT colleagues. This can provide momentum to maintain quality of patient centred care.

Thank you
